In physics, sound is a vibration that typically propagates as a wave of pressure, through a transmission medium such as a gas, liquid or solid. If the frequency range is 20-20,000Hz it would be audible for a young healthy human ear. In human physiology and psychology, sound is the reception of such waves and their perception by the brain. Humans can only hear sound waves as distinct pitches ...

Please review the FAQs and contact us if you find a problem. Credits: 1 Recommended: I would consider this an easier course than the "core" science courses. Course Description: Students will study oceanography as a science from many different aspects. Chemical, physical, and geological oceanography will be explored. Students will study not only the ocean butâ€¦!
