Finite-difference time-domain or Yee's method (named after the Chinese American applied mathematician Kane S. Yee, born 1934) is a numerical analysis technique used for modeling computational electrodynamics (finding approximate solutions to the associated system of differential equations).

Computer-Aided Design and Applications is an international journal on the applications of CAD and CAM. It publishes papers in the general domain of CAD plus in emerging fields like bio-CAD, nano-CAD, soft-CAD, garment-CAD, PLM, PDM, CAD data mining, CAD and the internet, CAD education, genetic algorithms and CAD engines.

CAD Journal | CAD and Applications

However, Hotelling doesn't get you to economic growth with finite resources " production is still decreasing over time, and tends asymptotically to zero " it's just that there is no collapse and oil is distributed over time such that there are no gains in net present value to be achieved by shifting production forward or back in time.
