Here is a list of elements of the periodic table, their atomic numbers, and element symbols. The list is ordered by increasing atomic number, which is the number of protons in an atom of that element. Each element has a symbol, which is a one- or two-letter abbreviation of its name.

For <sup>12</sup>C the atomic mass is exactly 12u, since the atomic mass unit is defined from it. For other isotopes, the isotopic mass usually differs and is usually within 0.1 u of the mass number. For other isotopes, the isotopic mass usually differs and is usually within 0.1 u of the mass number.

In the diagram above, you must fill either the element, its chemical symbol, # of electrons, # of protons, # of neutrons, Atomic Number, or Atomic Mass/Weight for each of the elements below. Use your Periodic Table on the Mar. 9th HW page to help you with determining what will go in the blanks.

Atomic Number. The atomic number (represented by the letter Z) of an element is the number of protons in the nucleus of each atom of that element. An atom can be classified as a particular element based solely on its atomic number.

atomic mass and mass numbers If you add the number of protons and neutrons for an atom, the sum will be the atom's mass number. This does not show the actual mass of the atom, just information about the

atom's nucleus.

Atomic number, atomic mass, and relative atomic mass Atoms of each element contain a characteristic number of protons. In fact, the number of protons determines what atom we are looking at (e.g., all atoms with six protons are carbon atoms); the number of protons in an atom is called the atomic number .
