In the petroleum refining and petrochemical industries, the initialism BTX refers to mixtures of benzene, toluene, and the three xylene isomers, all of which are aromatic hydrocarbons. The xylene isomers are distinguished by the designations ortho " (or o "), meta " (or m "), and para " (or p ") as indicated in the adjacent diagram.

Polycyclic aromatic hydrocarbons (PAHs, also polyaromatic hydrocarbons or polynuclear aromatic hydrocarbons) are hydrocarbons "organic compounds containing only carbon and hydrogen" that are composed of multiple aromatic rings (organic rings in which the electrons are delocalized). The simplest such chemicals are naphthalene, having two aromatic rings, and the three-ring compounds anthracene ...

Polycyclic aromatic hydrocarbon - Wikipedia

A review is provided on the aqueous reduction of CO₂ to hydrocarbons at copper electrodes, covering the literature since the first report of the reaction in 1985. This reaction is of interest as a potential component of a carbon energy cycle (i.e. CO₂ + energy → methane → CO₂ + energy). The synthesis of hydrocarbons from CO₂ is a complex multistep reaction with adsorbed intermediates ...

A review of the aqueous electrochemical reduction of CO₂

15.6.1 Prevalence of exposure to secondhand smoke in domestic environments. Exposure of children to tobacco smoke in domestic environments, especially homes and cars, is a particular concern given the health risks of secondhand smoke (SHS) for children (see Chapter 4, Section 4.9) and the long hours that most children spend each day in these environments.
