Electrode potential,  $E$ , in chemistry or electrochemistry, according to a IUPAC definition, is the electromotive force of a cell built of two electrodes: . on the left-hand side of the cell diagram is the standard hydrogen electrode (SHE), and; on the right-hand side is the electrode in question. The SHE is defined to have a potential of 0 V, so the signed cell potential from the above setup is

Electrochemistry is the branch of physical chemistry that studies the relationship between electricity, as a measurable and quantitative phenomenon, and identifiable chemical change, with either electricity considered an outcome of a particular chemical change or vice versa. These reactions involve electric charges moving between electrodes and an electrolyte (or ionic species in a solution).
