SDK Support. The Dwolla API has officially maintained software packages to make it easier for developers to get started with making requests. This section is here to provide basic instructions on how to install these packages and get up and running with them.

**Dwolla API docs**

OAuth is a standard for access-delegating authentication. It allows an application to securely obtain limited access to another service's API on behalf of a user. The standard is designed to reduce the amount of information that a service must give to a third party. It also allows a user to grant one application access to another service's API without giving access to all of the user's data. The standard is designed to be easy to use and to be secure.
