In the 1920s and 1930s the so-called modern synthesis connected natural selection and population genetics, based on Mendelian inheritance, into a unified theory that applied generally to any branch of biology. The modern synthesis explained patterns observed across species in populations, through fossil transitions in palaeontology, and complex cellular mechanisms in developmental biology.

Assessment Inventory (PDF) In 2016, the state Legislature asked OSPI to find out how much time Washington students spent taking state and district-required tests.

### **Legislature and Government - OSPI**

Approximately 70% of Earth's surface is occupied by a continuous stretch of seawater with an average depth of 5 km. Oceans support floating forests with variable sea plants and animals, where marine vegetation is considered to be more primitive and richer than land-based plants. Seaweeds are important marine resources playing a major role in supporting the rich biodiversity of the sea.

increased fund to class size and composition - i.e. 33 in biology (tough to find resources) fluidity in September/October - have funds available the second week in September - October is too late and doesn't work

### **School District No. 8 (Kootenay Lake) DPAC/CUPE/KLTF/PVP**

It is a responsibility we are failing to meet. According to statistics from the U.S. Department of Education, the gap in eighth-grade reading and math test scores between low-income students and their wealthier peers hasn't shrunk at all over the past 20 years. (The gap between poor and wealthier fourth-grade students narrowed during those two decades, but only by a tiny amount.)
